Election/Restrictions

1. Claims 1, 24-26 and 28-31 are allowable. Claims 6-7, 10-11, 20-23, 27 and 32 previously withdrawn from consideration as a result of a restriction requirement, require all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement among inventions I-VI and Species I-II, as set forth in the Office action mailed on 01/09/08, is hereby withdrawn** and claims 6-7, 10-11, 20-23, 27 and 32 hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The amendment has been initiated to correct the minor informality in the application.

In the claims:

In claim 28, lines 7-8, "for stopping stop movement of the cutting tool" has been changed to

Art Unit: 3724

--for stopping the movement of the cutting tool--.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach that the cartridge is adapted to perform the predetermined action a single time upon detection of the dangerous condition and then to be replaced, in combination with other limitations set forth in claim 1; a cartridge removably coupled to the support frame and one or more single-use components associated with cartridge and adapted to be used upon detection of the dangerous condition, in combination with other limitations set forth in claim 28.

Regarding claims 1 and 28, Lokey (3,785,203) or Yoneda (4,117,751) teaches the invention substantially as claimed, including a support frame having a work surface for supporting workpieces; a cutting tool supported by the frame and movable relative to the work surface; and a safety system configured to detect a dangerous condition between a person and the cutting tool and to perform a predetermined action upon detection of the dangerous condition to mitigate the dangerous condition. Lokey and Yoneda also teaches that the safety system also include a cartridge removably coupled to the support frame. It should be noted that the brake pawl 25 and solenoid 126 in Lokey are considered to be a cartridge. Yoneda also teaches a brake pawl 20 and its actuator means that are considered to a cartridge which is removable. See Figs. 1-4 in Yoneda.

Lokey or Yoneda does not explicitly teach that the cartridge is adapted to be replaced after performs the predetermined action a single time. Lokey or Yoneda does not explicitly teach that cartridge has one or more single-use components to be expended when the

Art Unit: 3724

cartridge performs the predetermined action. Baur (3,965,112) teaches that it is old and well known in the art to replace solenoids/electromagnetics with spring loaded actuators that are electrically responsive by tensioned wires for the purpose of providing fast acting, less expensive, and smaller devices that providing large mechanical forces. Bielinski (5,606,889) discloses that it is old and well known in the art to use spring loaded actuators that use fusible members are contained in replaceable/removable cartridges for the purpose of facilitating efficiency of the operation of the device thereby allowing the user to quickly and easily replace used cartridges with new ones. However, Lokey or Yoneda in view of Baur and Bielinski does not explicitly teach that the cartridge is adapted to be replaced after performs the predetermined action a single time and the cartridge removably coupled to the support frame and one or more single-use components associated with cartridge and adapted to be used upon detection of the dangerous condition.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claims 1 and 28.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
